

Engagement Task List

Misi's Gin

Kenyeres Mihály E.V. · Budapest

Prepared by BridgeWorks · 2026-05-31

Phase 0: Access and Setup (Day 1 to 3)

Get these before any work starts. Without them you are blocked.

- ❑ **WordPress admin login** from Misi (admin-level user, not editor)
- ❑ **Hosting/cPanel access** at Aruba (needed for the crawler unblock and security headers)
- ❑ **Wordfence access** (it is the likely cause of the GPTBot/ClaudeBot block). Confirm the plugin is installed and you can reach its settings
- ❑ **Domain registrar / DNS access** (only if Google Business Profile verification or email needs it)
- ❑ **Confirm the product facts in writing from Misi:** exact ABV (retailers say 40%, one award body says 40.5% - confirm), bottle size (0.5L), full botanical list, the yuzu/kaffir lime story, batch size (~70 bottles), direct price, and whether he wants to sell direct online
- ❑ **Confirm the 2022 World Gin Awards Country Winner Hungary detail** and get the official tasting note text
- ❑ **Get the 19 partner venues as a list with links** (websites or Google Maps), split into "buy online here" vs "drink here"
- ❑ **Get founder photo(s)** and permission to use the personal story and name (Mihály Kenyeres)
- ❑ **Full WordPress backup before touching anything** (UpdraftPlus or host snapshot). Verify the backup downloads and opens
- ❑ **Set up a staging copy if the host allows it**, so changes are tested before going live

Phase 1: Critical Fixes (Week 1)

These clear the issues that make the brand invisible and legally exposed. Highest priority.

1.1 Unblock the AI crawlers

- ❑ In Wordfence, find the rule blocking GPTBot and ClaudeBot (Tools > Live Traffic / Blocking). Whitelist both user agents
- ❑ If Wordfence is not the cause, ask Aruba support to remove GPTBot and ClaudeBot from any proxy bot-blocking rules
- ❑ **Verify:** run `curl -A "GPTBot/1.0" https://www.misisgin.com/` and `curl -A "ClaudeBot" https://www.misisgin.com/` and confirm both return HTTP 200, not 404. Re-test both the HU and EN homepages

1.2 Install the SEO foundation

- ❑ Install and activate **Rank Math** (or Yoast) SEO plugin
- ❑ Run its setup wizard, connect Google Search Console
- ❑ Set a unique, keyworded **title and meta description per language**. Example EN title: "Misi's Gin: Award-Winning Hungarian Craft Gin from Budapest". Example HU title: "Misi's Gin: Díjnyertes magyar kézműves gin | Budapest"
- ❑ **Verify:** view page source, confirm the title is no longer the duplicate "Misi's Gin – Misi's Gin" and a meta description is present

1.3 Add structured data (schema)

- ❑ Add **LocalBusiness/Distillery schema** with name, address (1141 Budapest, Paskál-malom utca 3), phone, email, founding date, awards, and sameAs links to Facebook, Instagram, TikTok. JSON-LD is ready in GEO-AUDIT-misisgin.md Appendix B
- ❑ Add **Person schema** for Mihály Kenyeres (founder/distiller) with the confirmed bio

- Add **Product schema** for the gin (name, ABV, size, image, awards as award properties)
- Add the JSON-LD via Rank Math's custom schema field or the theme header, server-rendered, not via a JavaScript widget
- **Verify:** test both pages in Google Rich Results Test and schema.org validator, confirm no errors

1.4 Fix the sitemap and robots.txt

- Let Rank Math regenerate a clean sitemap that includes all 6 language home pages with correct lastmod dates
- Remove or fix the stale 2015 /blog/ entry
- Add a Sitemap: directive line to robots.txt pointing at the new sitemap
- Submit the sitemap in Google Search Console
- **Verify:** open the sitemap URL, confirm all language versions are listed; confirm Search Console accepts it

1.5 Show price and product spec (the biggest conversion unblock)

- Add a clear product block to the page: bottle size, ABV, botanical list, tasting notes, and price (or "from X HUF")
- **Verify:** price, size, and ABV are visible without contacting anyone

1.6 Legal and compliance layer

- Add an **age-verification gate** (18+) before content loads, localized per language. Use a lightweight plugin (e.g. Age Gate)
- Publish a **privacy policy** (GDPR) and an **impressum** (Hungarian requirement for an EV), link both in the footer
- Surface the ÁSZF/terms clearly in the footer
- **Verify:** the age gate appears on first visit; privacy policy and impressum are reachable from every page

Phase 2: Conversion and Content (Week 2)

Turn the brochure into something that sells.

2.1 Build the purchase path

- Add a **"Buy / Pour it here" block**: the partner retailers as clickable cards (lead with online sellers: ginshop.hu, iDrinks, totaldrinks.hu), and the bars as a separate "As served at" list
- Add a **direct order option**: at minimum a clean order form (name, product, quantity, email/phone) plus a `mailto:` button pre-filled with subject "Order: Misi's Gin". Add a tap-to-call button and a WhatsApp or Messenger link for mobile
- (If Misi wants full direct sales) scope a simple **WooCommerce** setup: one product, flat-rate Hungarian shipping, bank transfer or SimplePay/Stripe. Only after the form proves demand
- **Verify:** a visitor can reach at least one working purchase path in one click on both desktop and mobile

2.2 Rewrite the homepage messaging

- Replace the bare "Misi's Gin" headline with an informative one, for example "Gold-medal Hungarian craft gin from Budapest, with a Japanese citrus character". Keep the friendship tagline as a supporting line
- Add a **value-proposition block** directly under the headline (story + proof + origin + personal service in about four sentences)
- Add the **2022 Country Winner Hungary award** and link all awards to the awarding bodies
- Fix the **"occured" typo** in the EN founder story
- **Verify:** a first-time visitor understands what the product is and why it matters within 5 seconds

2.3 Build the trust wall

- Awards as **badges linked to the award bodies**
- Add **3 to 5 short testimonials/quotes**: one partner bartender, one retailer, one customer (collect these from Misi)
- Show the **"as served at" venue logos** as social proof
- **Verify**: the page now carries proof beyond the 2021 medals

2.4 Finish the cocktail content

- Add **method steps** (2 to 3 lines) and a "why this works with Misi's" line to each of the three cocktails
- Add **Recipe schema** to each cocktail (JSON-LD ready in the GEO audit appendix for the Negroni)
- **Verify**: cocktails validate as Recipe schema and read as usable recipes

2.5 Email capture

- Add a **newsletter signup** (one field) with an incentive: "Get the next batch and Christmas gift sets first". Connect to a simple tool (MailerLite or Mailchimp free tier)
- **Verify**: a test signup lands in the list

Phase 3: SEO Structure (Weeks 3 to 4)

The real fix for losing the brand's own search results to retailers.

- **Split the single page into real pages** with their own URLs: Home, The Gin (product), Awards, Cocktails, Order/Shop, Gift, Story/About
- Give each page its own **title, meta description, one H1, and proper H2/H3 hierarchy** (current headings are styling-only H5/H6)
- Target one keyword cluster per page: The Gin = "magyar kézműves gin / craft gin Budapest"; Awards = "díjnyertes magyar gin"; Gift = "gin ajándék"; Order = "Misi's gin rendelés / ár"
- Add **internal links** between the new pages
- Add **Open Graph and Twitter card tags** (Rank Math handles this) so shared links and press coverage pull a proper card
- Build a **"Press / As seen in" page** linking existing coverage (szeretlekmagyarorszag.hu, Roadster, Székely Konyha) for ranking authority
- Re-submit the updated sitemap to Search Console
- **Verify**: each new page has a unique title, one H1, and validates schema; Search Console indexes the new URLs

Phase 4: Performance and Hardening (Week 4)

- Add a **caching/optimization plugin** (e.g. LiteSpeed Cache or WP Rocket): combine/defer the 30 stylesheets and 59 scripts, defer jQuery
- Serve **WebP/AVIF images** for the galleries (the optimization plugin or a converter plugin handles this)
- Add **security headers** via the host or a plugin: Strict-Transport-Security, X-Content-Type-Options, X-Frame-Options, Referrer-Policy, and a basic CSP
- Publish an **llms.txt** at the root summarizing the brand, product, awards, and key URLs
- **Verify**: run PageSpeed Insights and confirm LCP/INP improved; confirm security headers present via a header checker; confirm llms.txt loads

Foundation Fix: Definition of Done

The one-time engagement is complete when all of the following are true:

- ☐ GPTBot and ClaudeBot both return 200
- ☐ LocalBusiness, Person, Product, and Recipe schema present and validating
- ☐ Price, ABV, size, and botanicals visible on-site
- ☐ At least one working purchase path in one click
- ☐ Age gate, privacy policy, and impressum live
- ☐ Unique titles and meta descriptions per language
- ☐ Sitemap complete with all languages and submitted to Search Console
- ☐ Trust wall (linked awards + testimonials + venue logos) live
- ☐ Email capture working
- ☐ Re-run the GEO audit and confirm a materially higher score

Optional: Visibility Care (Monthly Retainer)

Ongoing work that compounds. Only if Misi takes the retainer.

Each month:

- ☐ One AI-visibility check (is the site readable and being cited) plus a short progress note to Misi
- ☐ 1 to 2 new content pieces or cocktail recipes with proper schema
- ☐ Monitor Search Console for new rankings on the target keywords

Across the first 90 days:

- ☐ Prepare and submit a **Wikidata entry** for the brand and founder (acceptance is the platform's call, not guaranteed)
- ☐ Set up and optimize a **Google Business Profile** (service-area distillery, Budapest) with full NAP, category, and photos
- ☐ Authentic participation in **Reddit (r/gin, r/cocktails) and Hungarian spirits communities**, within each platform's rules

Growth initiatives to plan and ship (this quarter):

- ☐ **Christmas/seasonal gift set** (numbered bottle, glass, tasting card) for Q4, tied to the email list
- ☐ **Paid Budapest distillery tasting/experience**, sold via the site and tourism channels (GetYourGuide, hotel concierge)
- ☐ **HoReCa-to-direct bridge**: QR table cards at partner venues ("Enjoyed Misi's here? Order a bottle")
- ☐ **B2B/export/wholesale page** (distributor enquiry, MOQ, trade contact) to convert the multilingual export ambition
- ☐ Consolidate the 6 thin language versions into deep EN and HU first, add languages back only with full content

Notes and Risks

- The age gate, privacy policy, and impressum are a legal requirement, not optional polish. Do these in Week 1 even if other items slip.
- Confirm ABV before publishing schema: retailers list 40%, one award body lists 40.5%. Use whatever Misi confirms is on the current label.

- Wikidata and Wikipedia inclusion cannot be promised. Treat as best-effort groundwork.
- Back up before each phase. The site uses a page builder, so test structural changes on staging where possible.
- Keep all client-facing copy in Misi's voice and bilingual where it faces customers.
