

Oliviks Kitchen – Digital Systems Handover

Prepared for: Aese Agaigbe and Cynthia Chia, Oliviks Kitchen **Prepared by:** Emmanuel Ehigbai, BridgeWorks **Date:** 14 July 2026
Engagement: Foundation package (contract 29 April 2026)

This document is yours to keep. It lists everything that was built, every account you own, and how to run each system day to day. No technical background is needed. Where a password or key is involved, it is not written here. Passwords are shared privately.

1. What you now have

Four systems, working together:

- 1. **A new website** that tells your story and sends customers to your shop.
- 2. **Your existing WooCommerce shop**, restyled to match, secure again, and now carrying every dish on the menu.
- 3. **A customer list of your own** (email + WhatsApp), with automatic welcome emails.
- 4. **A stronger Google presence:** optimized profile, the Restaurant Guru award, and review handling.

How they connect: a customer finds you on Google → lands on the website → orders on the shop → gets a branded receipt → joins your list → gets your weekly specials → orders again. That last loop is the point of all of it.

2. Your accounts – what you own

System	Where	Login
Website (marketing site)	oliviks-kitchen.vercel.app (soon oliviks.com)	Managed by BridgeWorks; content editable by you at /admin
Shop + orders (WooCommerce)	shop.oliviks.com/wp-admin	Your existing WordPress account (user: bridgeworks account also exists for us)
Email list (MailerLite)	dashboard.mailerlite.com	Sign in with Google as olivikskitchen@gmail.com
Customer list backup (Supabase)	supabase.com, project "oliviks-kitchen"	Your Supabase account
Domain + hosting + business email	namecheap.com	Your Namecheap account
Google Business Profile	business.google.com	Your Google account
WhatsApp Business	The phone with +36 70 567 3070	Your phone

Everything above belongs to Oliviks. BridgeWorks holds working access to deliver and support, nothing more.

3. How to do the common things

Change a menu item, price, photo, or availability

1. Go to **oliviks-kitchen.vercel.app/admin** (after the domain move: oliviks.com/admin).
2. Pick the dish from the list.
3. Edit the name, description, price, image, or switch it available/unavailable.
4. Paste the **admin access code** (shared privately) and press Save.
5. The public menu updates within about a minute. Note: this edits the menu on the website. Prices on the shop are separate; change those in WooCommerce (Products) because that is what customers actually pay.

Send the weekly specials email (5 minutes)

1. Open MailerLite → Campaigns → Create.
2. Use the weekly specials template (in the "Email and WhatsApp pack" we handed over): fill in the dish, the price, one photo.
3. Send to the group **Oliviks subscribers**. Best time: Thursday or Friday, late morning.

Send the same special on WhatsApp

1. On the +36 70 567 3070 phone, open WhatsApp Business → your broadcast list.
2. Paste the same text and photo. Each person receives it as a private message.
3. Anyone who replies STOP: remove them from the list.

The sign-up offer

The website signs customers up with **"Free puff puff with your first pickup order."** They show the email at the counter to claim it. Three welcome emails then go out automatically over a week; you never have to touch them. If you ever want to switch the offer to "500 HUF off the first order," a ready-made backup version already exists in MailerLite; ask us and we swap it in minutes.

Respond to a Google review

Reply to every negative review, and to positive ones when you have something specific to say. Short, warm, never copy-paste. From the Google Business app or business.google.com → Reviews.

The counter QR card

A print-ready card ("Get weekly specials first," with a QR that opens WhatsApp) is in your handover pack. Print it A5 or A4 and stand it at the pickup counter.

4. Still open, and whose move it is

Item	Whose move
Look at the new site and approve it (or send changes)	You
Point oliviks.com at the new site (15 min, after your approval)	BridgeWorks
Create the WhatsApp broadcast list on the business phone	You (we guide)
Print the counter QR card	You
Balance invoice EO-2026-13 (136,305 HUF, due 19 July)	You
Review online prices for the 9 newly added shop products	You (tell us the markups, we set them)

One note on prices: the website shows your in-store menu prices, and says clearly that online/delivery prices include a small markup. The shop charges the online price. If any online price looks wrong, tell us the right number and we change it the same day.

5. Looking after it going forward

Everything handed over runs on free tiers today: hosting, the database, and the email tool (free up to 1,000 subscribers). Two dates to know:

- **9 October 2026** — the oliviks.com certificate renews. It is set up to be handled; we flag it here for completeness.
- **MailerLite** becomes paid only if your list grows past 1,000 subscribers. A good problem.

Running these systems weekly (specials emails, WhatsApp broadcasts, Google posts, review replies, listing updates, the blog) is exactly what the optional Growth Retainer in your proposal covers. The Foundation built the machine. The retainer drives it. If you want that, say so; if you prefer to run it yourselves, this document plus the Email and WhatsApp pack is everything you need.

For anything at all: office@bridgeworks.agency.

Appendix — for any future technician

- Marketing site: Next.js 15, hosted on Vercel (project oliviks-kitchen). Code managed by BridgeWorks. Menu content: Supabase project tolnysainnkpfxibff (tables menu_categories, menu_items, menu_option_groups, menu_options, subscribers), public reads via anon key with row-level security, writes server-side only.
- Shop: WordPress + WooCommerce on Namecheap shared hosting (server72.web-hosting.com), shop.oliviks.com as an add-on domain with its own SSL (PositiveSSL, renews via Namecheap). Order emails send as "Oliviks Kitchen" olivikskitchen@gmail.com.
- Sign-up flow: website form → /api/subscribe → Supabase insert (consent required) → MailerLite group "Oliviks subscribers" (double opt-in on).
- DNS: managed on Namecheap hosting nameservers. Mail (MX jellyfish.systems) and the shop A record must never be touched during website changes.
- Domain flip runbook, brand CSS for the shop, and all templates live in the BridgeWorks engagement records and can be re-shared on request.

Oliviks Kitchen · Rákóczi tér 9, 1084 Budapest · Come hungry.
