€2,650
Total investment, full 16-week engagement

THE CLIENT

Who Is CEEFM

CEEFM Kft is a certified facility management company operating in Hungary and Central Eastern Europe. They deliver precision hygiene and property management services to high-value residential complexes and hospitality assets.

Their flagship partnership is with Limehome, one of Europe's leading digital-first aparthotel operators with properties across the continent. CEEFM handles the operational backbone of multiple Limehome properties in Budapest, which means their service quality is held to a high standard.

The operational capability was there. The digital presence was not.

THE PROBLEM

What We Found at the Start

When the engagement began, CEEFM had a solid service record and an established operational team. What they were missing was a digital presence that matched the quality of the work they were actually doing. Specifically:

- ✗ Incomplete website with no functional contact form. Visitors had no clear way to reach the business.
- ✗ No LinkedIn company page. On a platform where B2B property managers make decisions, CEEFM did not exist.
- ✗ No Google Analytics. There was no way to know who was visiting the site, where they came from, or what they did.
- ✗ No structured process for capturing or converting online enquiries. Potential clients had nowhere to land.
- ✗ No cold outreach capability. Growth relied entirely on referrals and manual coordination with no system to generate consistent inbound interest.

A business doing serious operational work for a premium European aparthotel brand was essentially invisible to the property owners and hospitality managers it needed to reach.

THE APPROACH

What We Built and How

A 16-week digital growth programme was designed and executed across five phases. Each phase builds on the last, so the foundation has to be right before the outreach begins, and the outreach has to be running before the advertising scales.

PHASE 1

Weeks 1 to 2

Foundation

Complete the website. Wire all contact forms directly to the company inbox. Install Google Analytics with goal tracking. Build the LinkedIn company page with optimised service descriptions, brand-consistent visuals, and Limehome featured as social proof.

PHASE 2

Weeks 3 to 4

Outreach

Build a targeted list of Budapest property management companies, aparthotel operators, and residential complex managers. Write a three-email cold outreach sequence in both English and Hungarian. Launch the initial campaign and track reply rates.

PHASE 3

Weeks 3 to 8

Advertising

Design ad creative using AI-generated assets. Launch Google and Meta campaigns targeting professional property owners managing 5 or more units in Budapest. Run three ad variants simultaneously and optimise weekly based on performance data.

PHASE 4

Weeks 5 to 12

Content and SEO

Publish three social media posts per week on LinkedIn and Facebook. Complete keyword research for facility management in Hungary and CEE. Optimise all website pages for on-page SEO. Create and fully optimise the Google Business Profile.

PHASE 5

Weeks 9 to 16

Scale and Compound

Scale the best-performing ad variants. Expand cold outreach to 150 or more targets. Document all systems with clear written guides so the client can understand and eventually run them independently. Review retainer continuation.

THE INVESTMENT

What It Cost

The engagement was structured as a one-time setup fee plus a monthly retainer. This keeps the client's upfront risk low while ensuring the work gets done properly before the retainer kicks in.

ITEM	AMOUNT
Setup fee (one-time)	€1,050
Monthly retainer x 4 months	€1,600
Total 16-week engagement	**€2,650**

For context: a comparable agency engagement in Budapest typically starts at €8,000 to €15,000 for the same scope of work. This engagement delivered the same output at a fraction of that cost, with

full documentation included so the client is not dependent on ongoing spend once the system is running.

THE RESULTS

Where Things Stand

ENGAGEMENT ACTIVE

Current Status

The engagement is live and in progress. Website is complete and functional. LinkedIn company page is built with Limehome listed as a key client. Email infrastructure is configured and contact forms are connected. Cold outreach sequence is written and ready to launch. Ad campaigns are in the build phase.

This section will be updated with full performance data, enquiry volume, and conversion results as the engagement progresses through its 16-week timeline.

THE TAKEAWAY

What This Means for Your Business

The CEEFM engagement is a direct demonstration of what the BridgeWorks model looks like in practice. One operator, AI-powered tools, agency-quality output, delivered at a price that actually makes sense for a small business.

Every system built for CEEFM was documented clearly enough for the client to understand and eventually own. That is the standard on every BridgeWorks engagement. The goal is never dependency. It is capability.

> *"Your business does not need a €10,000 agency budget to have a professional digital presence. It needs the right systems, built properly, with someone who has already figured out how to do it."*

If your business is in a similar position to where CEEFM started, the conversation is straightforward. Get in touch and we will look at exactly what needs to be built and what it will take to build it.
