Date: 2026-05-18

Audit thesis

Strong proof exists, but it can be converted into stronger enquiry flow and AI-visible evidence.

Free preview. Short on purpose.

Full paid audit includes prioritization and implementation detail.

Findings (3)

Finding 1

What I saw

Pyramidon has strong proof signals, but the key stats and credibility points are not surfaced early enough to shape the reader's decision quickly.

Why it matters

In property services, buyers skim. If the proof does not hit in the first scroll, enquiries drop and comparison shopping increases.

Severity: High

Finding 2

What I saw

The offer is credible, but the path from proof to enquiry is likely too indirect. The next step for a new visitor is not obvious.

Why it matters

Proof without a clear next step creates passive trust, not action. The site can be trusted and still under-convert.

Severity: Medium

Finding 3

What I saw

Your proof could be made more 'AI-visible' by structuring it consistently across key pages (so summaries and assistants can quote it cleanly).

Why it matters

AI and search assistants amplify the clearest, most structured facts. If proof is scattered, you lose free visibility in AI search results.

Severity: Medium

Likely effect

Even with strong real-world credibility, the site can underperform on enquiries if proof is not organized into a simple decision path. That usually shows up as fewer inbound leads and more price-shopping.

Quick win

Move the strongest proof points into the first scroll on the key landing page, then add one clear CTA that matches the buyer's intent.

Bigger opportunity

Build a single 'proof hub' page that packages your strongest facts into a clear story and makes them easy for both humans and AI search assistants to quote.

Recommended next step

Recommendation

A focused proof and conversion audit: identify the 3â 5 proof assets that move the most revenue, then rebuild the enquiry path around them.
