GEO Audit Preview

Pyramidon | pyramidon.hu/en

Prepared 2026-05-19

Audit thesis

Pyramidon already has strong proof: 6,500+ apartments managed, 35+ years of experience, 98% client satisfaction, named team members, direct emails, and clear Budapest district focus. The gap is not substance. The gap is that this proof is not yet packaged for AI systems, answer engines, and local search platforms to confidently cite and recommend the company.

Preview GEO Readiness

50/100

Below Average | preview score, not a full audit score

Three GEO Findings

1. Strong proof exists, but it is not packaged for AI citation

Severity: High

The homepage has numbers and proof that AI systems like: 6,500+ apartments, 35+ years, 98% satisfaction, services, districts, team members, and offices. But these are concentrated on one long page. AI systems cite concise, self-contained answer blocks and dedicated pages more reliably than broad homepage sections.

2. Human trust signals need entity markup

Severity: High

Pyramidon has named staff, roles, emails, phone numbers, services, and office locations. These should be connected with Organization or LocalBusiness schema, Service schema, Person schema, ContactPoint, FAQPage, BreadcrumbList, and sameAs links to verified third-party profiles.

3. The AI crawler and indexing layer needs verification

Severity: Medium

The live homepage is content-rich, but robots.txt, sitemap coverage, llms.txt, schema validation, canonical signals, Google Search Console, and Bing Webmaster signals need a technical GEO pass before AI accessibility can be trusted.

Business Impact

Pyramidon has the proof assets many competitors lack. That creates upside. The work is less about inventing a new message and more about structuring existing proof so search engines, AI systems, and property owners can understand it faster.

Likely gains

- More visibility for Budapest property management queries.
- Better AI-generated recommendations in ChatGPT, Perplexity, Gemini, and Bing Copilot.
- Higher trust from condominium committees and property owners.
- Cleaner quote enquiries from better-qualified prospects.

Quick win

Add a GEO foundation layer: FAQ block with schema, Organization and Service schema, Person schema for leadership, clean sitemap and robots.txt, and a short llms.txt file summarizing the company, services, team, offices, and proof numbers.

Bigger opportunity

Build a proof hub around the buyer questions Pyramidon already answers: how to compare property management companies, what transparent condominium accounting includes, and what professional common representation looks like in Districts III, XI, and XIII.

Recommended Next Step

The right next step is a full GEO audit and implementation plan. The full audit should verify the technical layer, score the site across the GEO framework, and turn Pyramidon's existing proof into a structured visibility plan.

Full audit should include

- Verified GEO score and category breakdown.
- AI crawler access report.
- Sitemap and indexability review.
- Schema recommendations.
- AI-citable content plan.
- Quick wins ranked by effort and impact.
- 30-day implementation roadmap.

Suggested call topic

How Pyramidon can turn its existing proof into better visibility across Google, ChatGPT, Perplexity, and local property-management searches.
