Generated: 2026-06-11

Overall GEO Score: 20/100 (Critical)

University of Pattern Drafting is an online school teaching professional pattern drafting and garment construction, founded by Umo Anwana with 15+ years of fashion industry experience. Despite genuine expertise and nine structured courses, the site scores 20/100 on GEO. The domain returned ECONNREFUSED during the audit, meaning AI crawlers cannot currently access any content. There is no structured data of any kind, no citable educational content, and no third-party brand presence on the platforms AI models train on and cite. Every major AI search engine has zero awareness of this brand. The gap is large but the fixes are direct: resolve server connectivity, implement schema, publish free educational content, and build a Wikipedia entity. With 30 days of focused effort on the action plan, the score can realistically reach 40-50 out of 100.

GEO Score Breakdown

Category	Score	Weight	Status
AI Citability	14/100	25%	Critical
Brand Authority	12/100	20%	Critical
Content E-E-A-T	34/100	20%	Critical
Technical GEO	34/100	15%	Critical
Schema & Structured Data	4/100	10%	Critical
Platform Optimization	14/100	10%	Critical

AI Platform Readiness

How well the site is optimized for discovery and citation by each major AI search platform.

Platform	Score	Status
Google AI Overviews	16/100	Critical
ChatGPT	11/100	Critical
Perplexity	13/100	Critical
Gemini	15/100	Critical
Bing Copilot	14/100	Critical

AI Crawler Access

Crawler	Platform	Status	Recommendation
GPTBot	ChatGPT	Unknown	Add explicit Allow in robots.txt once server is accessible
OAI-SearchBot	ChatGPT Search	Unknown	Add explicit Allow in robots.txt
ClaudeBot	Claude AI	Unknown	Add explicit Allow in robots.txt
PerplexityBot	Perplexity	Unknown	Add explicit Allow in robots.txt
Bingbot	Bing Copilot	Unknown	Add explicit Allow and submit to Bing Webmaster Tools
Googlebot	Google / Gemini	Allowed	Confirmed via search index — maintain access
Google-Extended	Gemini Training	Unknown	Add explicit Allow in robots.txt

Key Findings

Severity	Finding
Critical	Domain returning ECONNREFUSED — crawlers cannot access the site: Direct HTTP connections to both www and non-www versions of the domain failed during the audit. AI crawlers (GPTBot, ClaudeBot, PerplexityBot) and search bots encounter the same failure. A site that does not respond cannot be indexed, cited, or featured by any AI platform. This is the single most urgent issue and blocks all other improvements.
Critical	No schema markup of any kind detected: The site uses a custom PHP build with no CMS. No EducationalOrganization, Course, Person, FAQPage, BreadcrumbList, or any other schema.org type is implemented. AI models cannot build an entity graph for this brand. Google cannot show course rich results. Nine courses have zero structured data.
Critical	No llms.txt file — zero AI-readiness infrastructure: No llms.txt exists at the domain root. This file directly signals to AI crawlers what the site is and what content is available for indexing. Its absence forfeits a significant early-adoption advantage in AI search visibility.
Critical	No informational or citable content — site is a product catalog only: Every indexed page is a course enrollment page or a contact form. AI systems cite content that answers questions, not pages that sell products. Without blog posts, guides, tutorials, or free resources, there is nothing for ChatGPT, Perplexity, or Google AI Overviews to surface in response to pattern drafting queries.
High	No Wikipedia or Wikidata entity for the brand or founder: Wikipedia presence is the single strongest signal for entity recognition by LLMs. Without it, ChatGPT and Google Gemini cannot reliably identify this brand as a distinct entity. The founder has 15+ years of verifiable industry credentials, providing a basis for a Wikipedia stub article once third-party citations exist.
High	No XML sitemap — crawl coverage incomplete: No sitemap.xml was found at the standard location. Without a sitemap, crawlers rely on link discovery alone. Suspended or unlinked course pages are invisible to both search engines and AI crawlers.
High	www vs. non-www canonical inconsistency: Both www and non-www versions of the domain appear in search results. No confirmed canonical tag or 301 redirect enforces a single preferred version. This creates duplicate content across all indexed pages and splits crawl budget.
High	No trust infrastructure — WhatsApp-only contact: The site has no public email address, no privacy policy, no terms of service, and no enrollment or refund policy. All contact is routed through WhatsApp. This fails both Google Quality Rater Guidelines and AI system trustworthiness scoring.
High	No LinkedIn Company Page: No LinkedIn presence was found for the school or its founder. LinkedIn is Bing Copilot primary source for professional entity validation. Its absence contributes to invisibility across AI tools targeting professional audiences.
Medium	Facebook presence extremely weak — 536 likes only: For an education business with nine courses, 536 Facebook likes represents minimal social proof. AI models assess brand authority partly through social signal volume. The current numbers are insufficient to register as a meaningful authority signal.
Medium	No Reddit or forum presence detected: No mentions found on Reddit, Quora, or any fashion or sewing forum. Reddit is a primary source for Perplexity AI citations. Subreddits like r/sewing and r/patternmaking have active communities asking questions this school can directly answer.
Medium	TikTok educational content not ported to website: Educational videos exist on TikTok but are not embedded or transcribed on the website. This wastes existing content that could become indexed, citable material at zero additional production cost.

Severity	Finding
Low	PHP file extension URLs and query-string course routing: URLs like /contact.php expose server technology and provide no keyword signal. Course URLs use query strings (/course/enrol/?cn=) rather than clean keyword slugs, which reduces both SEO value and AI citation accuracy.
Low	No Open Graph or Twitter Card meta tags: When AI tools surface shared links or citations, they rely on Open Graph metadata for accurate previews. Without these tags, AI systems generate their own previews, reducing brand control over how the site appears in citations.

Prioritized Action Plan

Quick Wins (This Week)

1. Resolve ECONNREFUSED: diagnose firewall rules or hosting configuration blocking cloud-based crawlers
2. Create /llms.txt at the domain root using the audit template — 30 minutes, immediate AI signal
3. Add EducationalOrganization JSON-LD to the shared PHP header template — one file edit covers all pages
4. Submit courses to Class Central (free listing) — one of the most AI-cited educational directories
5. Create a LinkedIn Company Page and add URL to footer and Organization schema sameAs

Medium-Term (1-4 Weeks)

1. Add Course JSON-LD to all 9 active course enrollment pages with pricing and instructor data
2. Add Person JSON-LD to /about/ page for Umo Anwana with knowsAbout and sameAs fields
3. Resolve www vs. non-www with 301 redirect and canonical tags across all pages
4. Add public email address, Privacy Policy page, and Refund Policy to site footer
5. Add Open Graph meta tags to homepage and all course pages
6. Generate and submit sitemap.xml to Google Search Console and Bing Webmaster Tools
7. Handle suspended course pages with proper 301 redirects or 410 Gone responses
8. Transcribe and embed 3-5 existing TikTok educational videos on the website with supporting text
9. Create Google Business Profile (Online Education category)
10. Add robots.txt with explicit allow directives for GPTBot, ClaudeBot, OAI-SearchBot, PerplexityBot, Bingbot

Strategic (1-3 Months)

1. Publish 5 free long-form educational articles with Umo Anwana byline and publication date: body measurement guide, standard measurement chart, bodice block drafting, pattern grading explained, corset construction basics
2. Begin Reddit presence in r/sewing and r/patternmaking: 2-3 genuine answers per week, linking to free content — builds Perplexity citation signals over 60-90 days
3. Secure two or three third-party press citations (industry interview, guest post, course review) — necessary prerequisite for a Wikipedia submission
4. Submit Wikipedia stub article for Umo Anwana once external citations exist — single highest-impact long-term action for ChatGPT and Gemini entity recognition
5. Fully optimize YouTube channel: keyword-rich description, consistent thumbnails, full video transcripts in descriptions — the one existing Google ecosystem asset

Methodology

This GEO audit evaluates how well a website is optimized for discovery, citation, and recommendation by AI-powered search systems (ChatGPT, Perplexity, Google AI Overviews, Gemini, Bing Copilot). Six categories are scored 0-100 and weighted to produce an overall GEO Score. Traditional SEO optimizes for search engine rankings. GEO optimizes for AI citation.

Category	Weight	What We Measure
AI Citability	25%	How quotable and extractable content is for AI systems
Brand Authority	20%	Third-party mentions, entity recognition, off-site signals
Content E-E-A-T	20%	Experience, Expertise, Authoritativeness, Trustworthiness
Technical GEO	15%	AI crawler access, rendering, llms.txt, meta tags, speed
Schema & Structured Data	10%	Schema.org markup quality, accuracy, completeness
Platform Optimization	10%	Readiness for Google AIO, ChatGPT, Perplexity, Gemini, Copilot

Score Interpretation

Score Range	Rating	Meaning
90-100	Excellent	Top-tier GEO optimization; highly likely to be cited by AI
75-89	Good	Strong GEO foundation with room for improvement
60-74	Fair	Moderate GEO presence; significant optimization opportunities
40-59	Poor	Weak GEO signals; AI systems may struggle to cite or recommend
0-39	Critical	Minimal GEO optimization; largely invisible to AI systems
